Top 20 Frequently Asked Angular JS Interview Questions and Answers - 2019

Before going to discuss about interview questions of angular js a brief introduction what is Angular JS?

Angular JS is an open source Model-View-Controller framework which is similar to the: JavaScript framework.

Angular JS is probably one of the most popular modern day web frameworks available today. This framework is used for developing mostly Single Page applications. This framework has been developed by a group of developers from Google itself.

Because of the sheer support of Google and ideas from a wide community forum, the framework is always kept up to date. Also, it always incorporates the latest development trends in the market.

Best Angular JS Training Institute

Ok let's start Interview Q&A

1. In 30 seconds, define AngularJS.

AngularJS is an open-source JavaScript framework designed for creating dynamic single web page applications with fewer lines of code.

2. Mention some advantages of using AngularJS framework.

Some of the key advantages of using AngularJS framework include:

- It provides a great "desktop-like" experience to the end user.
- By freeing the developer from having to register callbacks manually or write repetitive low-level DOM manipulation tasks, it saves months of development.

ANGULAR JS INTERVIEW QUESTION: PART-1

1. What is Angular js?
2. Explain what are the key features of Angular js?
3. Explain what is scope in Angular js?
4. Explain what is services in Angular js?
5. Explain what is Angular Expression? Explain what is key difference between angular expressions and JavaScript expressions?
6. With options on page load how you can initialize a select box?
7. Explain what are directives? Mention some of the most commonly used directives in Angular js application?
8. Mention what are the advantages of using Angular js?
9. Explain what Angular JS routes does?
10. Explain what is data binding in Angular js?

Angularjs 6 interview questions and answers. Most asked interview questions angular. Top angularjs interview questions. Angularjs interview questions for 6 years experience. Angularjs 6 interview questions and answers for experienced pdf. Angularjs interview questions and answers for 6 years experience. Angularjs advanced interview questions.

Opinions expressed by Entrepreneur contributors are their own. Most people's biggest job-hunting fear is being put on the spot by oddball interview questions such as these (which are real): "Describe the color yellow to someone who's blind." – Spirit Airlines"If you were asked to unload a 747 full of jelly beans, what would you do?" – Bose"Who would win in a fight between Spiderman and Batman?" – Stanford UniversityOffbeat questions are nearly impossible to prepare for and they don't achieve the interviewer's objective – to test out-of-the-box thinking and the ability to perform under pressure. That's the bad news.Related: 9 Things Successful People Won't DoThe good news is that companies are moving away from them. Recent research shows these questions do little more than boost the interviewer's confidence. Even companies famous for oddball questions are abandoning them. In the words of Laszlo Bock, Google's HR chief:"If you've heard that Google likes to pose brain-teaser questions to candidates—like why manhole covers are round—your information is out of date. There's no evidence that they suggest how people perform on the job."A Glassdoor study of tens of thousands of interviews found the 50 questions you're most likely to be asked in your next interview:What are your strengths?What are your weaknesses?Why are you interested in working for us?Where do you see yourself in 5 years?Why do you want to leave your current company?What can you offer us that someone else can't?Why was there a gap in your employment between these two dates?What are three things your former manager would like you to improve on?Are you willing to relocate?Are you willing to travel?Tell me about an accomplishment you are most proud of.Tell me about a time you made a mistake.What is your dream job?How did you hear about this position?What would you accomplish in the first 30/60/90 days on the job?Discuss your resume.Discuss your educational background.Describe yourself.Tell me how you handled a difficult situation.Why should we hire you?Why are you looking for a new job?Would you work holidays/weekends?How would you deal with an angry or irate customer?What are your salary requirements?Give a time when you went above and beyond the requirements for a project.Who are our competitors?What was your biggest failure?What motivates you?What's your availability?Who's your mentor?Tell me about a time when you disagreed with your boss.How do you handle pressure?What is the name of our CEO?What are your career goals?What gets you up in the morning?What would your direct reports say about you?What were your bosses' strengths/weaknesses?If I called your boss right now and asked him what is an area that you could improve on, what would he say?Are you a leader or a follower?What was the last book you read for fun?What are your co-worker pet peeves?What are your hobbies?What is your favorite website?What makes you uncomfortable?What are some of your leadership experiences?How would you fire someone?What do you like the most and least about working in this industry?Would you work 40+ hours a week?What questions haven't I asked you?What questions do you have for me?Though these questions may be less exciting to prepare for than "Spiderman vs. Batman," they are what you need to be ready for.Most interviewees are only prepared for about 10 questions, so this list alone can give you a leg up. Study the list carefully and have answers ready – but not robotically rehearsed – so that you can speak comfortably, flexibly, and confidently about each of these topics.If you want to make a great impression and stand out from the crowd, preparing for these 50 questions is not enough. Follow the nine strategies below and weave the knowledge they impart into your responses. Then you'll truly ace your interview.1. Identify your "hook."Most hiring managers interview a lot of people. So many that they generally have to go back to their notes to remember candidates—the exception being candidates with a strong hook. Sometimes these hooks are how people dress or their personality, but the best hook is a strong story that's work-related. When you can wow an interviewer with a memorable story that shows what a strong candidate you are, you'll rise to the top of the list.2. Know the essence of the job you're applying for.Get to know the job intimately that you're applying for. Don't just read the job description—study it and picture yourself performing every task required of you. When you interview, framing your answer so that you reveal your significant knowledge about the job gives you a massive advantage.Related: How Successful People Stay Calm3. And know what makes you a great fit for it.Know exactly what makes you fit into the position perfectly and speak to it during the interview. What makes you special? It could be that you're an idea machine, or a statistical fanatic. Whatever it is, know it and prepare to fit it into your answers.For example, when an interviewer asks, "What are your strengths?" skip the clichés and go right into qualities about you that are unique to the job. You'll make it clear that you're the perfect fit.4. Know the company.No matter how prepared you are to talk about yourself, not knowing the essentials of the company you're interviewing for conveys a lack of preparation and interest. You can't show an interviewer how you'll fit in the company until you know the company.Before your interview, delve deeply into the company website to build a strong mental foundation. Make sure you know the basics; how the company makes money, the top executives, and what the company aims to accomplish in the near future (strategic objectives). Go online and read recent news articles about the company. Also check out their Twitter and Facebook pages.5. Prepare a list of follow-on questions.Prepare a list of follow-on interview questions and outline key points you will touch on if asked these questions. For example, if you say your biggest strength is time-management, you need to be ready for the interviewer to ask something like, "What does this strength look like in action?" This preparation will make your responses more pointed, avoid awkward silences and uncertainty, and it will build your confidence prior to the interview.6. Practice, practice, practice.You, and everyone else interviewing for the job, already know many of the questions you'll be asked. The difference lies in preparation. Preparing unique and position-specific responses will give you the competitive edge over everyone else. You don't need to memorize answers, but instead know certain points of reference about yourself that you can apply to different questions.Make sure to "mock interview" yourself. Video your responses until you're able to speak comfortably and flexibly—as opposed to rote repeating answers—about your prepared topics. Videoing yourself may feel awkward when you do it, but it will pay off during your interview.Related: Please Stop Saying These Ridiculous Phrases at Work7. Relax.If you can't relax during your interview, then nothing you do to prepare will matter. Being yourself is essential to the selection process, and interviewers will feel it if you're too nervous.8. Show your confidence. Showing fear or anxiety appears weak compared to a relaxed smile and genuine confidence. Numerous studies show that smiling not only increases your happiness and confidence, but it also puts the people you're interacting with at ease. This is mostly due to mirror neurons in the brain that naturally mimic other people's expressions and emotions.Pulling this off requires emotional intelligence (EQ), a skill that employers are increasingly looking for in candidates. And it's no surprise, as 90% of top performers on the job are high in EQ. Working on your EQ can also help you to make more money, as people with high EQs earn \$29,000 more annually on average.8. Stay positive.It may seem obvious that maintaining positivity is essential in an interview, but it can be very difficult to do when discussing some topics. It's tough to be positive when describing difficult bosses or coworkers from your past, or explaining why you were fired from your previous job, but that's exactly what employers want to see in you. Show them that you can maintain a positive attitude about a challenging environment, and they'll see the resilient and flexible individual they're looking for.9. Be honest.Good interviews have a way of getting to the crux of who you are. They may have an innate sense for reading people, or they might just be really good at asking the right questions. Regardless, it's essential to approach your interview with honesty.If you interview dishonestly, you'll either not get the job when the interviewer sees right through you, or you'll end up in a job that's a poor fit. Don't focus on what you think the interviewer wants to hear. Instead focus on giving an honest and passionate breakdown of what you have to offer.Bringing it all togetherLet's face it, interviewing is still tough. It's hard to show who you really are and what you're capable of during a quick sit-down chat. These strategies will help you to eliminate nervousness and anything unexpected that might derail an otherwise great interview.A version of this article first appeared on TalentSmart.com.Related: Misused Words That Make Smart People Look Dumb Angular is a robust front-end JavaScript framework that is widely used for app development. With the increased popularity, there is a high demand for Angular developers. This article on Angular Interview Questions will present some commonly asked questions and how to answer them. The questions are bifurcated into two levels, beginner and advanced. To brush up your basics, check out our videos on YouTube. You could also refer to our articles for better clarity. Now, without further ado, let's begin. Angular was introduced to create Single Page applications. This framework brings structure and consistency to web applications and provides excellent scalability and maintainability. Angular is an open-source, JavaScript framework wholly written in TypeScript. It uses HTML's syntax to express your application's components clearly. 2. What is TypeScript? TypeScript is a superset of JavaScript that offers excellent consistency. It is highly recommended, as it provides some syntactic sugar and makes the code base more comfortable to understand and maintain. Ultimately, TypeScript code compiles down to JavaScript that can run efficiently in any environment. 3. What is data binding? Which type of data binding does Angular deploy? Data binding is a phenomenon that allows any internet user to manipulate Web page elements using a Web browser. It uses dynamic HTML and does not require complex scripting or programming. We use data binding in web pages that contain interactive components such as forms, calculators, tutorials, and games. Incremental display of a webpage makes data binding convenient when pages have an enormous amount of data. Angular uses the two-way binding. Any changes made to the user interface are reflected in the corresponding model state. Conversely, any changes in the model state are reflected in the UI state. This allows the framework to connect the DOM to the Model data via the controller. However, this approach affects performance since every change in the DOM has to be tracked. 4. What are Single Page Applications (SPA)? Single-page applications that load once with new features just being mere additions to the user interface. It does not load new HTML pages to display the new page's content, instead generated dynamically. This is made possible through JavaScript's ability to manipulate the DOM elements on the existing page itself. A SPA approach is faster, thus providing a seamless user experience. 5. Differentiate between Angular and AngularJS The following table depicts the aspects of Angular vs AngularJS in detail: Feature AngularJS Angular Language JavaScript TypeScript Architecture Supports Model-View-Controller design Uses components and directives Mobile support Not supported by mobile browsers Supports all popular mobile browsers Dependency Injection Doesn't support Supports Routing @routeProvider is used to provide routing information @Route configuration is used to define routing information Management Difficult to manage with an increase in source code size Better structured, easy to create and manage bigger applications 6. What are decorators in Angular? Decorators are a design pattern or functions that define how Angular features work. They are used to make prior modifications to a class, service, or filter. Angular supports four types of decorators, they are: Class Decorators Property Decorators Method Decorators Parameter Decorators 7. Mention some advantages of Angular. Some of the common advantages of Angular are - MVC architecture - Angular is a full-fledged MVC framework. It provides a firm opinion on how the application should be structured. It also offers bi-directional data flow and handles the real DOM. Modules - Angular consists of different design patterns like components, directives, pipes, and services, which help in the smooth creation of applications. Dependency injection: Components dependent on other components can be easily worked around using this feature. Other generic advantages include clean and maintainable code, unit testing, reusable components, data binding, and excellent responsive experience. 8. What are the new updates with Angular10? Older versions of TypeScript not supported - Previous versions of Angular supported typescript 3.6, 3.7, and even 3.8. But with Angular 10, TypeScript bumped to TypeScript 3.9. Warnings about CommonJS imports - Logging an object to a JSON string, limitTo - Limits an array/string, into a specified number of elements/characters, lowercase - Format a string to lowercase. 20. What is view encapsulation in Angular? View encapsulation defines whether the template and styles defined within the component can affect the whole application or vice versa. Angular provides three encapsulation strategies: Emulated - styles from the main HTML propagate to the component. Native - styles from the main HTML do not propagate to the component. None - styles from the component propagate back to the main HTML and therefore are visible to all components on the page. 21. What are controllers? AngularJS controllers control the data of AngularJS applications. They are regular JavaScript Objects. The ng-controller directive defines the application controller. 22. What do you understand by scope in Angular? The scope in Angular binds the HTML, i.e., the view, and the JavaScript, i.e., the controller. It is expected to be an object with the available methods and properties. The scope is available for both the view and the controller. When you make a controller in Angular, you pass the \$scope object as an argument. 23. Explain the lifecycle hooks in Angular In Angular, every component has a lifecycle. Angular creates and renders these components and also destroys them before removing them from the DOM. This is achieved with the help of lifecycle hooks. Here's the list of them - ngOnChanges() - Responds when Angular sets/resets data-bound input properties. ngOnInit() - Initialize the directive/component after Angular first displays the data-bound properties and sets the directive/component's input properties/ ngDoCheck() - Detect and act upon changes that Angular can't or won't detect on its own. ngAfterContentInit() - Responds after Angular projects external content into the component's view. ngAfterContentChecked() - Respond after Angular checks the content projected into the component. ngAfterViewInit() - Respond after Angular initializes the component's views and child views. ngAfterViewChecked() - Respond after Angular checks the component's views and child views. ngOnDestroy() - Cleanup just before Angular destroys the directive/component. 24. What is String Interpolation in Angular? String Interpolation is a one-way data-binding technique that outputs the data from TypeScript code to the HTML view. It is denoted by {{ }}. 25. What are Template statements? Template statements are properties or methods used in HTML for responding to user events. With these template statements, the application that you create or are working on, can have the capability to engage users through actions such as submitting forms and displaying dynamic content. For example, Delete hero The template here is deleteHero. The method is called when the user clicks on the button. Ahead of Time (AOT) compilation converts your code during the build time before the browser downloads and runs that code. This ensures faster rendering to the browser. To specify AOT compilation, include the --aot option with the ng build or ng serve command. The Just-in-Time (JIT) compilation process is a way of compiling computer code to machine code during execution or run time. It is also known as dynamic compilation. JIT compilation is the default when you run the ng build or ng serve CLI commands. 27. Explain the @Component Decorator. TypeScript class is one that is used to create components. This genre of class is then decorated with the "@Component" decorator. The decorator's purpose is to accept a metadata object that provides relevant information about the component. The image above shows an App component - a pure TypeScript class decorated with the "@Component" decorator. The metadata object that gets accepted by the decorator provides properties like templateUrl, selector, and others, where the templateUrl property points to an HTML file defining what you see on the application. 28. What are Services in Angular? Angular Services perform tasks that are used by multiple components. These tasks could be data and image fetching, network connections, and database management among others. They perform all the operational tasks for the components and avoid rewriting of code. A service can be written once and injected into all the components that use that service. 29. What are Promises and Observables in Angular? While both the concepts deal with Asynchronous events in Angular, Promises handle one such event at a time while observables handle a sequence of events over some time. Promises - They emit a single value at a time. They execute immediately after creation and are not cancellable. They are Push errors to the child promises. Observables - They are only executed when subscribed to them using the subscribe() method. They emit multiple values over a period of time. They help perform operations like forEach, filter, and retry, among others. They deliver errors to the subscribers. When the unsubscribe() method is called, the listener stops receiving further values. 30. What is ngOnInit? How is it defined? ngOnInit is a lifecycle hook and a callback method that is run by Angular to indicate that a component has been created. It takes no parameters and returns a void type. export class MyComponent implements OnInit { constructor() { } ngOnInit(): void { //... } } 31. How to use ngFor in a tag? The ngFor directive is used to build lists and tables in the HTML templates. In simple terms, this directive is used to iterate over an array or an object and create a template for each element. {{ item }} "Let item" creates a local variable that will be available in the template "Of items" indicates that we are iterating over the items iterable. The * before ngFor creates a parent template. 32. What are Template and Reactive forms? Template-driven approach In this method, the conventional form tag is used to create forms. Angular automatically interprets and creates a form object representation for the tag. Controls can be added to the form using the NGModel tag. Multiple controls can be grouped using the NGControlGroup module. A form value can be generated using the "form.value" object. Form data is exported as JSON values when the submit method is called. Basic HTML validations can be used to validate the form fields. In the case of custom validations, directives can be used. Arguably, this method is the simplest way to create an Angular App. Reactive Form Approach This approach is the programming paradigm oriented around data flows and propagation of change. With Reactive forms, the component directly manages the data flows between the form controls and the data models. Reactive forms are code-driven, unlike the template-driven approach. Reactive forms break from the traditional declarative approach. Reactive forms eliminate the anti-pattern of updating the data model via two-way data binding. Typically, Reactive form control creation is synchronous and can be unit tested with synchronous programming techniques. 33. What is Bootstrap? How is it embedded into Angular? Bootstrap is a powerful toolkit. It is a collection of HTML, CSS, and JavaScript tools for creating and building responsive web pages and web applications. There are two ways to embed the bootstrap library into your application. Angular Bootstrap via CDN - Bootstrap CDN is a public Content Delivery Network. It enables you to load the CSS and JavaScript files remotely from its servers. Angular Bootstrap via NPM - Another way to add Bootstrap to your Angular project is to install it into your project folder by using NPM (Node Package Manager). npm install bootstrap npm install jquery 34. What is Eager and Lazy loading? Eager loading is the default module-loading strategy. Feature modules under Eager loading are loaded before the application starts. This is typically used for small size applications. Lazy loading dynamically loads the feature modules when there's a demand. This makes the application faster. It is used for bigger applications where all the modules are not required at the start of the application. 35. What type of DOM does Angular implement? DOM (Document Object Model) treats an XML or HTML document as a tree structure in which each node is an object representing a part of the document. Angular uses the regular DOM. This updates the entire tree structure of HTML tags until it reaches the data to be updated. However, to ensure that the speed and

performance are not affected, Angular implements Detection. With this, you have reached the end of the article. We highly recommend brushing up on the core concepts for an interview. It's always an added advantage to write the code in places necessary. Enroll for the Angular Course and gain in-depth knowledge of concepts like TypeScript, Bootstrap Grid System, and more! Next Steps We hope that this article on Angular Interview Questions helped you understand the type of questions asked and how to answer them. But, if you wish to learn Angular and perhaps make a career out of it, certification will come in handy. You can also explore and get familiar with interview questions related to other frontend languages like Angular, CSS or ReactJS interview questions. Simplilearn's Angular Certification Training Course helps you master front-end web development with Angular. You will learn the knack of creating applications with the help of concepts like facilitating the development of single-page web applications, components, typescript, dependency injection, and directives with this course. The course also includes a real-time project to test your skills. Do you have any questions for us? If you have feedback or questions, drop us a comment in the comments section. Our experts will get back to you as soon as possible!
