Go to sffpc Currently I use a Lianli O11D mini with an EATX motherboard, filled with a 4090 and 2 SFXL 850w PSUs, looking for a case that would be even smaller than this and still holds all the components, any recommendations? I am trying to find an updated version.. I think jester equonix package is the smallest torso For the head it's obviously headless but I don't think everyone can afford it so elemental crystal golem head if I am correct, is the smallest head For Arms, I believe is gnonsky brothers Legs are magma Please help me find the smallest avatar parts this is the information I have gathered so far it may not be accurate What is the smallest font style in MS word, we were given a maximum limit of two pages for a product design research sheet (which is absolutely ridiculous), and a minimum font size of 11, the smallest font style we found yet is Arabic Typesetting (its 11pt looks like 7.5pt Times new roman), Just wanted to ask if anyone here knows something that might be smaller Any help would be appreciated! Go to Unicode r/Unicode • Go to buildapc So I need to downsize my pc. It's currently in a Cooler Master HAF. It's a large tower and is hard to look up because Cooler Master has a lot of versions of the HAF. Anyway just looking for suggestions for a small case that can have an ATX size mb as I would rather not get a new mb. Currently looking at: Lian Li O11 Air Mini Fractal Design Meshify 2 Compact Cooling shouldn't be an issue as I rarely game anymore. Mainly the PC will just be used for web stuff. But I am keeping the GPU and everything needed to game cuz I do like to game every now and again. Any thoughts would be much appreciated Thank you New to Reddit?
