For those looking for a more automated approach, Outscraper's email extractor is an ideal solution. With user-friendly functionality and powerful extraction capabilities, it ensures accurate and reliable email gathering for all your marketing needs. Email Extractor is a powerful email extraction extension for Chrome that allows you to extract valid email IDs from web pages automatically. With its automation tool, you can discover all email addresses for a specific domain name and add a 5-second delay when visiting web pages automatically to ensure that all pages are loaded and all email IDs are collected. The plugin offers several features, including: * AutoVisit: build a queue of URLs that you want to visit automatically * Automation: discover all email IDs ending with a specific domain name * Extract Email Address from Web Pages Automatically * Auto-save all Email Addresses in the cloud while you browse any website (cloud storage starting at \$9.99/month) * share your Premium subscription with your colleagues * Download stored Email IDs The extension is fast, light (only 51KB), and removes duplicate email addresses. It also supports offline mode, which allows you to extract emails from local HTML documents and text files. To use the plugin, simply install it, build a queue of URLs that you want to visit automatically, and let the robot do the work for you. The extracted email IDs will be stored in your local storage, and you can export them to a text file or copy paste particular email IDs you need. The plugin is thoroughly tested, and its developer provides contact details in case anyone encounters any bugs. However, please note that the extension is not developed with an intention to spam people with marketing mails, so use it for your personal stuff only.
